Meteor Scatter – Morning is Better

The path of the earth intercepts more sporadic meteors at sunrise than it does at sunset.

Meteor Showers are named after the constellation where they appear to come from. Best results when that constellation rises

Meteor Scatter: Earth hits Comet Tail

Meteor Scatter

WSJT in MSK144 or FT-8 mode, or even SSB

100W and 7 elements is a mid-size station

Get on a reflector to arrange a QSO

Transmit and Receive until Magic happens

“Pings” are short, “Burns” are long enough for SSB

Links

Ping Jockey: mostly during showers <https://www.pingjockey.net/cgi-bin/pingtalk>

ON4KST Chat: Use 50mhz region 2 chat <http://www.on4kst.com/chat/start.php>

Mostly W-Coast guys.. some MS every day. <https://www.n6sjv.org/>

PSKreporter (set filters) SHOWS active stations.. set filters to MSK144 to see who is out there. Set filters for “your callsign” “sent by”: SHOWS WHO HEARS YOU! Even if they are not “active” if they have their RX on. This can be very encouraging! <https://pskreporter.info/pskmap.html>

VHF-Chat on SLACK: seems to be activity every day.

<https://app.slack.com/client/TFFQSUHUUH/CJ6JXJDN2>

DXmaps (set filters to 6m) Shows any QSO’s including SSB/CW if on DXcluster (can use any dx cluster program if you want another)
